INTRODUCTION

The monthly report of the Public Debt Administration is the report presenting a comprehensive analysis of the status, structure and dynamics of the public debt of the Republic of Serbia, as well as the risk analysis related to the process of public debt management, aimed at raising the level of transparency and accurate and timely awareness of investors, state institutions and other entities interested in the public debt of the Republic of Serbia.

The Public Debt Administration Monthly Report is published aiming at the improvement of the activities of the Republic of Serbia in the field of public debt through its informative contents, in accordance with internationally acknowledged standards and good business practice, as well as enabling stakeholders to grasp public debt, being the field of the public finance, in an easy and accurate manner, i.e. the activities and goals of the Public Debt Administration.

INTRODUCTORY WORD

OF THE DIRECTOR

Owing to the financial crisis in the United States of America and the Western Europe commencing in August 2008, and the need to save the financial systems of the affected countries through the issuance of public debt, public debt sustainability became a significant issue. Economic crisis affected Serbia as well, whereas the first of the economic policies to be affected was fiscal policy. With the aim of maintaining economic activity and preventing a significant decrease of GDP, the increase of budget deficit was executed in the period 2009-2011. The increase of budget deficit in the observed

period led to the increase in public debt, therefore its growth has been recorded in the last four years, both in absolute and relative terms.

The main guidelines for the governing of the public debt policy have been defined by the “Public Debt Management Strategy for the period 2012-2014”, being an integral part of the document “Economic and Fiscal Programme of Republic of Serbia for the year 2012”. According to the Strategy, the primary objective of the borrowing and public debt management strategy is to provide the funds required for the financing of the budget, by minimizing medium-term and long-term borrowing costs, with the acceptable level of risk. Minimizing long-term costs related to the public debt servicing has been limited by the structure of the debt whilst the reduction of the costs will be conditioned by an array of factors and risks.

With the aim of realizing defined strategic objectives, the Ministry of Finance of the Republic of Serbia- Public Debt Administration, being the holder of public debt policy, has been coordinating its activities with all administrations and sectors of the Ministry of Finance of the Republic of Serbia, with the National Bank of Serbia and other relevant institutions, accepting the advice provided by international financial institutions- the World Bank and the International Monetary Fund. In addition to this, Public Debt Administration is creating the investment base for government securities, through maintaining continuous contact with domestic and foreign investors. The USAID and the European Commission through their technical support are providing assistance to the Public Debt Administration in its endeavour to develop its activities and procedures as soon as possible and in the best way possible, in accordance with good international practice, in order to carry out its role in the field of public finance in the optimum way.

We expect that both domestic and foreign public, *i.e.* investors will become adequately informed on the status and the dynamics of the public debt thanks to this Monthly Report, with the aim of supporting the realization of defined objectives, as well as aiming to increase transparency.

Director

Branko Drčelić

ORGANIZATION AND COMPETENCES

Owing to the increased indebtedness of the most of the European countries, public debt policy, presenting a branch of economic policy, is becoming increasingly important. In accordance with the international practise and proposals of the World Bank, Public Debt Administration was founded on 1 October 2009 presenting an administrative authority within the Ministry of Finance of the Republic of Serbia. The primary objective of the Public Debt Administration is the minimizing of borrowing costs having the acceptable level of risk, *i.e.* the establishment of their optimal relations.

According to the regulations defining the system of public finance, public debt servicing presents an absolute and unconditional obligation having the priority over all the remaining budgetary obligations. It is especially important to emphasize that the obligation referring to the repayment of due public debt does not cease even during the temporary suspension of the budget

execution. All of the above-mentioned data indicate the importance of the existence and efficient functioning of the Public Debt Administration, being the holder of public debt policy.

The legal basis for the establishment and functioning of the Public Debt Administration is provided under the Public Debt Law, the Law on Budget of the Republic of Serbia, the Budget System Law and other regulations.

In accordance with the Public Debt Law, the Public Debt Administration on behalf of the Republic of Serbia may borrow in country or abroad, *i.e.* on domestic or foreign market, in domestic and foreign currency, to finance budget deficit, to refinance the outstanding debt, to finance projects having general importance, as well as to perform other obligations defined by the Law.

On the other hand, the Budget System Law defines general and specific fiscal rules regulating fiscal discipline.

STRATEGIC GUIDELINES

The current medium term strategy has been developed in cooperation with the World Bank experts, using the MTDS model (Medium Term Debt Strategy), which was implemented in practice in numerous countries all round the world. The document defines the following guidelines:

- 1) Ensuring the financing of fiscal deficit of the Republic of Serbia, within the meaning of short-term deficit (liquidity) and long-term deficit, being an integral part of the policy aimed at maintaining stability of the public finance system.
- 2) Defining an acceptable level of risk, in accordance with the targeted structure of public debt implying the structure of debt in terms of currency, structure of interest rates, structure of maturity and structure of debt with regard to the instruments.
- 3) Support to the development of the market of government securities issued on domestic and international market, with the aim of reducing medium-term and long-term borrowing expenses.
- 4) Raising the level of transparency and predictability of the process of borrowing.
- 5) The Public Debt Management Strategy ought to be supported and consistent with the general medium term framework of the Government.

On 30 April 2012, the share of debt denominated in dinars amounted to 16.2%. The share of the debt denominated in dinars is rather low, however it has been increasing in the last four years. Through the introduction of securities denominated in dinars having longer maturity (three-year and five-year maturity), the risk of refinancing, which is typical for securities denominated in dinars, is decreasing creating an adequate yield curve relating to domestic currency.

The objective of the Public Debt Management Strategy is to execute the most of the needs for the financing of the Republic of Serbia on domestic market, through the issuance in dinars, which is in accordance with the dinarization strategy.

*LAW ON BUDGET, EXECUTION OF THE BUDGET
OF THE REPUBLIC OF SERBIA FOR THE YEAR 2012*

In accordance with the Public Debt Law (“Official Gazette of RS, No. 61/05 and 107/09), presenting the legal basis for borrowing of the Republic of Serbia, the Republic of Serbia may borrow in country or abroad, i.e. on domestic or foreign market, in domestic and foreign currency. The Republic of Serbia may borrow to finance current account deficit, to service the outstanding

debt (refinancing), and to finance investment projects.

Based on the above-mentioned, in addition to maintaining liquidity, borrowing, *i.e.* public debt has a developing role as well. Apart from direct borrowing, the Republic of Serbia may issue guarantees in favour of public enterprises and local self-government units.

In accordance with the above-stated Law, the public debt of the Republic of Serbia is as follows:

- 1) Debt of the Republic, based on agreements concluded by the Republic,
- 2) Debt of the Republic based on issuing securities,
- 3) Debt of the Republic based on contracts/agreements according to which obligations of the Republic, pursuant to previously concluded agreements, have been rescheduled,
- 4) Debt of the Republic, based on the guaranty issued by the Republic, and/or based on counter-guaranty issued by the Republic,
- 5) Debt of local government and legal entities founded by the state for which the Republic has issued guarantees.
